REFERENCES AND SOURCE ATTRIBUTION

This Operations Manual has been developed as an original airline operations knowledge base for Horizon Airlines and is intended to support operational personnel, knowledge management initiatives, Retrieval-Augmented Generation (RAG) systems, operational decision support tools, training programs, and AI-powered operational assistants. The structure, terminology, operational concepts, and procedural framework contained within this document are derived from generally accepted aviation industry practices and guidance published by recognized aviation authorities and industry organizations. Primary reference materials used in the development of this manual include the Federal Aviation Administration (FAA) Airport Operations Handbook, FAA Advisory Circulars relating to Standard Operating Procedures and Operational Control, International Civil Aviation Organization (ICAO) operational guidance and safety management publications, International Air Transport Association (IATA) industry best practices for airline and ground operations, National Business Aviation Association (NBAA) Standard Operating Procedures guidance, United Kingdom Overseas Territories Aviation Circular (OTAC) Operations Manual Guidance, and publicly available airline operations management frameworks. This manual does not reproduce any source publication verbatim and is intended as an original operational reference document synthesizing common airline operational procedures, safety principles, governance practices, and industry-standard workflows. All operational procedures contained herein should be reviewed against applicable regulatory requirements, airport authority regulations, aircraft manufacturer guidance, and company-specific operating policies before implementation in live airline operations. The references listed below served as foundational guidance during development of this knowledge base and should be consulted for authoritative regulatory and technical requirements where applicable.

Reference Materials:

1. FAA Pilot's Handbook of Aeronautical Knowledge – Airport Operations.
2. FAA Advisory Circular AC 120-71 Series – Standard Operating Procedures and Operational Guidance.
3. ICAO Safety Management Manual (SMM).
4. ICAO Annexes and Operational Guidance Material.
5. IATA Airport Handling Practices and Ground Operations Standards.
6. IATA Dangerous Goods Regulations (DGR).
7. NBAA Airplane Standard Operating Procedures Manual.
8. UK Overseas Territories Aviation Circular (OTAC) Operations Manual Guidance.
9. Publicly Available Airline Operations Manuals and Industry Best Practices.
10. Aircraft Manufacturer Operational and Maintenance Guidance Documentation.

The purpose of these references is to provide a recognized industry foundation for the operational concepts presented throughout this manual. Horizon Airlines retains responsibility for adapting procedures to its specific operational environment,

regulatory framework, fleet composition, airport network, and organizational requirements.

SECTION 1

ORGANIZATION, GOVERNANCE & OPERATIONAL CONTROL

Document ID: OPS-GEN-001

Department: Executive Operations

Category: General Operations

Priority: Critical

Version: 1.0

Reference Sources

- FAA Airport Operations Handbook
 - FAA AC 120-71B Standard Operating Procedures Guidance
 - UK OTAC Operations Manual Guidance
 - NBAA Standard Operating Procedures Manual
-

1.1 PURPOSE

The purpose of this Operations Manual is to establish standardized operational procedures for Horizon Airlines and provide personnel with guidance for conducting safe, efficient, compliant, and customer-focused airline operations.

This manual serves as the primary operational reference for all departments involved in the planning, execution, monitoring, and support of airline activities.

All personnel shall comply with the procedures described herein unless deviation is required to preserve life, safety, security, or regulatory compliance.

1.2 OPERATIONAL PHILOSOPHY

Horizon Airlines operates according to the following principles:

Safety First

Safety shall take precedence over operational efficiency, schedule performance, commercial objectives, and financial considerations.

No employee shall be penalized for delaying or cancelling an operation due to legitimate safety concerns.

Regulatory Compliance

All operations shall comply with:

- National Aviation Regulations
- Airport Authority Requirements
- Air Traffic Control Instructions
- Company Operating Procedures
- Aircraft Manufacturer Guidance

Continuous Improvement

Operational procedures shall be reviewed periodically to identify:

- Safety improvements
 - Efficiency opportunities
 - Training requirements
 - Technology enhancements
-

1.3 ORGANIZATIONAL STRUCTURE

The operational structure consists of:

Executive Management

Responsible for:

- Corporate strategy
- Regulatory oversight
- Financial management
- Safety policy approval

Operations Division

Responsible for:

- Daily flight operations
- Crew management
- Dispatch
- Operational control

Ground Operations Division

Responsible for:

- Aircraft turnaround
- Ramp operations
- Passenger handling
- Baggage handling

Technical Operations Division

Responsible for:

- Maintenance
- Airworthiness
- Engineering support
- Aircraft reliability

Safety Department

Responsible for:

- Risk management
- Safety investigations
- Compliance monitoring
- Safety reporting

1.4 ACCOUNTABILITIES

Chief Executive Officer

The CEO shall:

- Approve operational policies.
- Allocate operational resources.

- Ensure regulatory compliance.
- Support safety management initiatives.

Director of Operations

The Director of Operations shall:

- Oversee all operational activities.
- Ensure SOP compliance.
- Manage operational disruptions.
- Coordinate interdepartmental activities.

Safety Manager

The Safety Manager shall:

- Maintain the Safety Management System.
- Monitor safety performance.
- Conduct risk assessments.
- Coordinate safety investigations.

Operations Control Manager

The OCC Manager shall:

- Supervise daily operations.
- Monitor flight progress.
- Manage operational disruptions.
- Coordinate emergency responses.

1.5 OPERATIONS CONTROL CENTER (OCC)

The OCC serves as the central coordination hub for airline operations.

The OCC shall operate continuously and maintain awareness of:

- Aircraft locations
- Flight status
- Weather conditions
- Airport conditions
- Crew availability

- Maintenance status
 - Security concerns
-

1.6 OCC RESPONSIBILITIES

The OCC shall:

Flight Monitoring

Track all flights from departure until arrival.

Monitor:

- Departure times
- Arrival times
- Route deviations
- Fuel status
- Aircraft performance

Disruption Management

Manage:

- Delays
- Diversions
- Cancellations
- Aircraft substitutions
- Crew reassignments

Communication

Maintain communication with:

- Flight crews
 - Airports
 - Ground handling agents
 - Maintenance control
 - Executive management
-

1.7 AUTHORITY TO OPERATE

A flight shall only be dispatched when:

Aircraft Requirements

The aircraft:

- Is airworthy.
- Has no unresolved critical defects.
- Meets operational requirements.

Crew Requirements

Assigned crew:

- Are qualified.
- Are medically fit.
- Meet duty time requirements.
- Possess required certifications.

Environmental Requirements

Weather:

- Meets operational minima.
- Does not create unacceptable risk.

Airport Requirements

Departure and destination airports:

- Are operational.
- Meet performance requirements.
- Support planned operations.

1.8 OPERATIONAL DECISION MAKING

Operational decisions shall follow the following hierarchy:

Level 1 – Routine Operations

Handled by operational personnel.

Examples:

- Gate changes
- Minor delays
- Passenger accommodations

Level 2 – Operational Disruptions

Handled by supervisors.

Examples:

- Significant delays
- Equipment failures
- Crew shortages

Level 3 – Major Disruptions

Handled by OCC management.

Examples:

- Airport closures
- Severe weather events
- Aircraft grounding

Level 4 – Crisis Events

Handled by executive management.

Examples:

- Major accidents
- Security incidents
- National emergencies

1.9 DOCUMENT CONTROL

All operational procedures shall be:

- Version controlled.
- Reviewed annually.
- Approved before publication.
- Distributed to affected personnel.

Personnel shall use only the latest approved version.

Outdated documents shall be archived and removed from operational use.

1.10 RECORD KEEPING

Operational records shall include:

Flight Records

- Flight plans
- Dispatch releases
- Fuel documentation
- Delay reports

Crew Records

- Qualifications
- Training records
- Duty logs

Maintenance Records

- Defect reports
- Maintenance actions
- Airworthiness documentation

Safety Records

- Hazard reports
- Incident reports
- Investigation reports

Records shall be retained according to regulatory requirements.

1.11 ESCALATION PROCEDURES

Personnel shall immediately escalate:

- Safety concerns
- Regulatory violations
- Security incidents
- Operational emergencies
- Significant service disruptions

Escalation shall occur through the established chain of command.

1.12 MANAGEMENT OF CHANGE

Before implementing operational changes:

1. Conduct risk assessment.
2. Identify affected stakeholders.
3. Update documentation.
4. Train affected personnel.
5. Monitor implementation results.

SECTION 2

PASSENGER SERVICES & AIRPORT OPERATIONS

Document ID: OPS-PAX-001

Department: Passenger Services

Category: Customer Operations

Priority: High

Version: 1.0

Reference Sources

- FAA Airport Operations Handbook
 - IATA Airport Handling Practices
 - Flight Operations Manual Template
 - UK OTAC Operations Manual Guidance
-

2.1 PURPOSE

The purpose of Passenger Services and Airport Operations is to ensure the safe, efficient, secure, and customer-focused movement of passengers throughout their journey from check-in until arrival at their destination.

Passenger Services personnel shall provide professional assistance while maintaining compliance with operational, safety, security, and regulatory requirements.

All passenger interactions shall prioritize safety, accuracy, efficiency, and customer satisfaction.

2.2 PASSENGER JOURNEY MANAGEMENT

Passenger Services personnel are responsible for managing all stages of the passenger journey.

These stages include:

- Reservation support
- Check-in
- Document verification
- Baggage acceptance
- Security coordination
- Boarding
- Arrival assistance
- Connection support
- Disruption management

Passenger information shall be handled in accordance with applicable privacy and data protection requirements.

2.3 CHECK-IN OPERATIONS

Check-in operations provide verification of passenger eligibility to travel and ensure accurate flight documentation.

Check-in agents shall:

- Verify passenger identity.
- Verify travel documentation.
- Confirm reservation status.
- Assign seating.
- Process baggage.
- Issue boarding passes.
- Identify special service requirements.

Passengers shall not be accepted for travel if required travel documents are missing, expired, invalid, or otherwise non-compliant.

2.4 DOCUMENT VERIFICATION

Before issuing a boarding pass, personnel shall verify:

Domestic Travel

- Government-issued identification.
- Reservation details.
- Security requirements.

International Travel

- Passport validity.
- Visa requirements.
- Transit requirements.
- Health documentation.
- Immigration requirements.

Any uncertainty regarding travel eligibility shall be escalated to a supervisor before passenger acceptance.

2.5 SEAT ASSIGNMENT PROCEDURES

Seat assignments shall be managed according to:

- Aircraft configuration.
- Passenger preferences.
- Safety requirements.
- Special assistance requirements.
- Operational considerations.

Emergency exit row seating shall only be assigned to eligible passengers meeting applicable requirements.

Passengers requiring special assistance shall not be assigned to emergency exit row seats.

2.6 BAGGAGE ACCEPTANCE

Checked baggage shall be accepted only after:

- Passenger verification.
- Flight verification.
- Weight verification.
- Security screening requirements have been satisfied.

Personnel shall:

- Verify baggage ownership.
- Apply baggage tags.
- Confirm destination coding.
- Identify special baggage.

Excess baggage fees shall be collected according to company policy.

2.7 SPECIAL BAGGAGE

Special baggage includes:

- Sporting equipment
- Musical instruments
- Medical devices
- Mobility aids
- Oversized baggage
- Fragile items

Special baggage shall be tagged and processed according to handling requirements.

Passengers shall be advised of any applicable limitations or liability restrictions.

2.8 DANGEROUS GOODS SCREENING

Passenger Services personnel shall identify prohibited items before baggage acceptance.

Items requiring special handling or restrictions may include:

- Lithium batteries
- Flammable materials
- Explosives
- Compressed gases
- Corrosive substances

Any suspected dangerous goods violation shall be immediately reported.

2.9 SPECIAL ASSISTANCE PASSENGERS

Special assistance services shall be provided to passengers requiring additional support.

These passengers may include:

- Passengers with reduced mobility
- Elderly passengers
- Passengers with medical conditions
- Visually impaired passengers
- Hearing impaired passengers

Required assistance shall be coordinated before departure whenever possible.

2.10 WHEELCHAIR SERVICES

Wheelchair assistance shall be coordinated from check-in until final arrival.

Personnel shall ensure:

- Proper documentation of assistance requests.
- Availability of required equipment.
- Safe transportation through airport facilities.
- Priority boarding where appropriate.

Passengers shall never be separated from required mobility equipment without approved procedures.

2.11 UNACCOMPANIED MINORS

Unaccompanied minors shall only be accepted in accordance with company policy.

Personnel shall:

- Verify guardian information.

- Complete required documentation.
- Provide identification materials.
- Monitor the child throughout airport processing.

The child shall remain under supervision until transferred to authorized personnel at destination.

2.12 PASSENGERS WITH MEDICAL REQUIREMENTS

Passengers requiring medical assistance shall be evaluated according to company policy.

Requirements may include:

- Medical clearance
- Oxygen arrangements
- Mobility assistance
- Medical equipment approval

Medical information shall be handled confidentially.

2.13 VIP AND PRIORITY PASSENGERS

VIP passengers may include:

- Government officials
- Corporate executives
- Frequent flyers
- Special guests

VIP processing shall be conducted professionally without compromising safety, security, or operational requirements.

Operational rules shall apply equally to all passengers.

2.14 SECURITY COORDINATION

Passenger Services personnel shall support airport security procedures.

Responsibilities include:

- Identity verification
- Boarding pass verification
- Reporting suspicious activity
- Assisting security personnel

Security concerns shall be immediately reported.

2.15 BOARDING OPERATIONS

Boarding operations shall begin according to approved schedules.

Boarding agents shall:

- Verify boarding passes.
- Verify passenger identity.
- Confirm security clearance.
- Monitor passenger flow.
- Communicate boarding status.

Boarding shall be conducted in an orderly and efficient manner.

2.16 PRIORITY BOARDING

Priority boarding may be provided to:

- Passengers requiring assistance
- Families with young children
- Premium passengers
- Active duty personnel where applicable

Priority boarding procedures shall not compromise operational efficiency.

2.17 FINAL BOARDING PROCEDURES

Before gate closure:

- Final passenger counts shall be completed.

- Missing passengers shall be identified.
- Announcements shall be made.
- Security reconciliation shall be performed.

No passenger shall board after gate closure without approval.

2.18 PASSENGER RECONCILIATION

All boarded passengers shall be reconciled against:

- Passenger manifests
- Boarding records
- Security records

Any discrepancy shall be investigated before departure.

2.19 DENIED BOARDING

Denied boarding may occur due to:

- Overbooking
- Documentation deficiencies
- Security concerns
- Operational restrictions

Affected passengers shall be treated professionally and provided assistance according to company policy.

2.20 MISSED CONNECTIONS

Passengers experiencing missed connections shall receive assistance regarding:

- Rebooking options
- Accommodation eligibility
- Meal vouchers where applicable
- Transportation arrangements

Priority shall be given to minimizing disruption.

2.21 DELAY MANAGEMENT

During delays, Passenger Services personnel shall:

- Provide timely updates.
- Manage passenger expectations.
- Coordinate support services.
- Escalate passenger concerns.

Accurate information shall always be provided.

2.22 FLIGHT CANCELLATIONS

In the event of cancellation:

- Passengers shall be notified promptly.
 - Rebooking procedures shall begin immediately.
 - Support services shall be coordinated.
 - Applicable compensation policies shall be followed.
-

2.23 ARRIVAL OPERATIONS

Upon arrival:

- Passenger disembarkation shall be coordinated.
 - Special assistance passengers shall receive priority support.
 - Transfer passengers shall receive guidance.
 - Arrival information shall be communicated as necessary.
-

2.24 CUSTOMER COMPLAINT MANAGEMENT

Complaints shall be handled professionally and respectfully.

Personnel shall:

- Listen actively.
- Document concerns.
- Provide accurate information.
- Escalate when required.

Complaint trends shall be reviewed to identify improvement opportunities.

2.25 CUSTOMER SERVICE RECOVERY

Service recovery measures may include:

- Rebooking assistance
- Travel credits
- Meal vouchers
- Hotel accommodations
- Transportation support

Service recovery efforts shall seek to restore customer confidence while maintaining operational compliance.

2.26 PASSENGER SAFETY RESPONSIBILITIES

Passenger Services personnel shall support:

- Safety announcements
- Emergency procedures
- Evacuation readiness
- Security compliance

Passenger safety shall remain the highest priority throughout all customer service activities.

2.27 PERFORMANCE MONITORING

Passenger Services performance shall be monitored through:

- Check-in processing times
- Boarding efficiency
- Customer satisfaction
- Complaint trends
- Operational compliance
- Service recovery effectiveness

Performance data shall be reviewed regularly to support continuous improvement initiatives.

SECTION 3

CHECK-IN OPERATIONS

Document ID: OPS-CIN-001

Department: Passenger Services

Category: Check-In Operations

Priority: High

Version: 1.0

Reference Sources

- FAA Airport Operations Handbook
- IATA Airport Handling Practices
- Flight Operations Manual Template
- UK OTAC Operations Manual Guidance

3.1 PURPOSE

The purpose of Check-In Operations is to verify passenger eligibility for travel, ensure compliance with security and regulatory requirements, process baggage, issue travel documentation, and prepare passengers for safe and efficient boarding. Check-in operations represent the first direct operational interaction between Horizon Airlines and its passengers and play a critical role in maintaining schedule integrity, security compliance, and customer satisfaction.

3.2 SCOPE

Check-in procedures apply to all passengers traveling on Horizon Airlines services including domestic, international, connecting, charter, code-share, and special operations flights. These procedures apply to airport check-in counters, self-service kiosks, online check-in systems, mobile check-in applications, and designated off-airport check-in facilities.

3.3 CHECK-IN OPENING PROCEDURES

Prior to opening check-in counters, passenger service personnel shall verify operational readiness. System functionality, printer functionality, baggage tag availability, boarding pass stock, passenger manifests, flight schedules, seat maps, and operational notices shall be reviewed. Personnel shall verify that all required communication systems are functioning and that any flight restrictions, delays, aircraft substitutions, or special operational requirements have been communicated.

Counter supervisors shall conduct a briefing before check-in begins. The briefing shall include passenger loads, special assistance requirements, expected operational disruptions, weather concerns, security alerts, staffing assignments, and flight-specific information.

3.4 PASSENGER IDENTIFICATION VERIFICATION

Before processing a passenger, personnel shall verify identity using approved government-issued documentation. Passenger names must exactly match reservation records. Discrepancies involving names, dates of birth, travel documents, or reservation information shall be resolved before check-in is completed.

Acceptable forms of identification may include passports, national identity cards, government-issued identification cards, or other approved travel documentation. Expired or damaged identification documents shall be evaluated according to applicable regulations and airline policy.

Any suspected fraudulent documentation shall be immediately reported to supervisory personnel and airport security authorities.

3.5 RESERVATION VALIDATION

Personnel shall verify that the passenger possesses a confirmed reservation for the scheduled flight. Reservation validation shall include confirmation of flight number, travel date, passenger status, ticket validity, fare conditions, and operational restrictions.

Standby passengers shall be processed according to standby procedures. Waitlisted passengers shall only be assigned confirmed seats when authorized by operational systems and applicable company policies.

Duplicate reservations, ticketing irregularities, or reservation discrepancies shall be escalated for resolution before travel authorization is granted.

3.6 TRAVEL DOCUMENT VERIFICATION

International travel requires verification of all necessary travel documentation. Personnel shall review passport validity, visa requirements, transit requirements, health documentation, immigration requirements, customs requirements, and destination-specific entry conditions.

Passengers traveling internationally shall be informed that final admission decisions remain the responsibility of destination authorities. Possession of travel documents does not guarantee entry into a country.

Documentation deficiencies shall be identified before boarding pass issuance. Passengers who fail to meet destination entry requirements shall not be accepted for travel unless authorized by competent authorities.

3.7 SEAT ASSIGNMENT PROCEDURES

Seat assignments shall be performed using approved reservation systems. Personnel shall consider passenger preferences, operational requirements, aircraft balance requirements, accessibility needs, premium service entitlements, and safety restrictions.

Exit row seats shall only be assigned to passengers meeting applicable eligibility requirements. Personnel shall verify that passengers assigned to emergency exit rows are physically capable of assisting in an emergency, understand applicable instructions, and meet regulatory requirements.

Passengers requiring special assistance shall not be assigned emergency exit row seats.

3.8 BAGGAGE ACCEPTANCE PROCEDURES

Checked baggage shall only be accepted after successful passenger verification and reservation validation. Personnel shall verify baggage ownership, apply destination baggage tags, verify baggage count, and ensure baggage is entered into operational tracking systems.

Each piece of checked baggage shall be weighed and inspected for compliance with baggage policies. Excess baggage charges shall be collected when applicable.

Passengers shall retain baggage claim receipts until baggage is successfully recovered at destination.

3.9 BAGGAGE WEIGHT AND SIZE LIMITATIONS

Personnel shall verify compliance with baggage size and weight restrictions. Oversized or overweight baggage shall be processed according to approved procedures.

Special handling may be required for baggage exceeding standard dimensions. Passengers shall be informed of any additional charges, restrictions, or handling limitations.

Baggage exceeding safety limitations shall not be accepted without appropriate authorization.

3.10 SPECIAL BAGGAGE PROCESSING

Special baggage categories include sporting equipment, musical instruments, medical devices, mobility equipment, fragile items, oversized baggage, and valuable items.

Personnel shall apply appropriate handling tags and ensure special handling requirements are communicated to baggage operations personnel.

Passengers shall be advised regarding limitations of liability and handling restrictions applicable to special baggage.

3.11 DANGEROUS GOODS SCREENING

All checked and carry-on baggage shall be screened for prohibited and restricted items. Personnel shall remain vigilant for indicators of dangerous goods violations.

Items requiring special review may include lithium batteries, compressed gases, flammable liquids, explosives, corrosive materials, radioactive substances, and hazardous chemicals.

Suspected dangerous goods violations shall immediately be reported to supervisors and airport security personnel.

No prohibited item shall be accepted for transport without appropriate regulatory approval.

3.12 SPECIAL ASSISTANCE PASSENGERS

Passengers requiring special assistance shall be identified during check-in. Personnel shall document required services and coordinate assistance throughout the passenger journey.

Special assistance categories include passengers with reduced mobility, elderly passengers, visually impaired passengers, hearing impaired passengers, passengers requiring medical support, and passengers requiring language assistance.

Service requirements shall be communicated to gate personnel and arrival station personnel.

3.13 UNACCOMPANIED MINOR PROCESSING

Unaccompanied minors shall be processed according to approved procedures. Personnel shall verify guardian information, emergency contact information, identification requirements, and authorization documentation.

Required forms shall be completed before acceptance. Unaccompanied minors shall remain under continuous supervision until transferred to authorized personnel at destination.

Any deviation from approved procedures shall require supervisory approval.

3.14 PASSENGERS REQUIRING MEDICAL ASSISTANCE

Passengers requiring medical assistance may require additional review before travel authorization. Medical clearances, oxygen requirements, mobility assistance, medication transportation requirements, and medical equipment approvals shall be evaluated according to company procedures.

Confidentiality of medical information shall be maintained at all times.

Medical concerns affecting fitness for travel shall be referred to designated authorities for review.

3.15 GROUP CHECK-IN PROCEDURES

Groups shall be processed efficiently while maintaining individual passenger verification requirements.

Group coordinators shall provide passenger manifests, travel documentation, baggage information, and special service requirements before processing begins.

Personnel shall ensure all group members are accounted for before boarding documentation is issued.

3.16 LATE CHECK-IN PASSENGERS

Passengers arriving after published check-in deadlines may be denied acceptance depending upon operational conditions.

Personnel shall evaluate available processing time, baggage handling limitations, security requirements, and boarding schedules before accepting late passengers.

Late acceptance shall not compromise safety, security, or on-time departure performance.

3.17 FLIGHT IRREGULARITIES DURING CHECK-IN

If operational disruptions occur during check-in, personnel shall provide timely and accurate information to passengers.

Disruptions may include delays, cancellations, gate changes, aircraft substitutions, weather events, maintenance issues, and security concerns.

Passenger communication shall remain factual, professional, and consistent with approved operational information.

3.18 BOARDING PASS ISSUANCE

Boarding passes shall only be issued after all eligibility requirements have been satisfied.

Boarding passes shall contain accurate passenger information, seat assignments, flight details, gate information, and boarding sequence information.

Any boarding pass error shall be corrected immediately.

Lost or damaged boarding passes shall be replaced using approved procedures.

3.19 CHECK-IN CLOSURE PROCEDURES

Check-in operations shall close according to published schedules. Supervisors shall verify passenger counts, baggage reconciliation status, standby passenger processing status, special assistance requirements, and final operational reports.

Any unresolved discrepancy shall be escalated before flight departure.

Final passenger information shall be transmitted to gate operations, baggage operations, flight operations, and operational control personnel.

3.20 QUALITY ASSURANCE

Check-in performance shall be monitored through operational audits, customer feedback, compliance reviews, baggage processing accuracy, document verification accuracy, security compliance performance, and departure performance metrics.

Continuous improvement initiatives shall be implemented to improve efficiency, accuracy, compliance, and passenger satisfaction.

END OF SECTION 3 – CHECK-IN OPERATIONS

SECTION 4

BOARDING OPERATIONS

Document ID: OPS-BRD-001

Department: Passenger Services

Category: Boarding Operations

Priority: High

Version: 1.0

Reference Sources

- **FAA Airport Operations Handbook**
 - **IATA Airport Handling Practices**
 - **Flight Operations Manual Template**
 - **UK OTAC Operations Manual Guidance**
-

4.1 PURPOSE

The purpose of Boarding Operations is to ensure the safe, secure, accurate, and efficient transfer of passengers from the terminal to the aircraft. Boarding procedures shall ensure compliance with security requirements, passenger reconciliation requirements, operational timelines, and safety regulations while minimizing delays and maintaining a positive customer experience.

Boarding operations represent the final passenger processing stage before departure and play a critical role in maintaining schedule integrity and operational safety.

4.2 SCOPE

Boarding procedures apply to all scheduled, charter, repositioning, and special operations flights operated by Horizon Airlines.

These procedures apply to:

- Domestic flights
- International flights
- Transit flights
- Connecting passengers
- Charter services
- Special operations

Boarding personnel shall ensure compliance with all operational, security, immigration, customs, and safety requirements.

4.3 PRE-BOARDING PREPARATION

Prior to boarding commencement, gate personnel shall verify operational readiness.

Preparation activities shall include:

- Verification of aircraft assignment.
- Verification of gate assignment.
- Confirmation of boarding schedule.
- Review of passenger manifest.
- Review of special service requests.
- Review of operational notices.
- Review of security requirements.

Any discrepancy affecting boarding operations shall be immediately escalated.

4.4 GATE SETUP PROCEDURES

Before passenger arrival at the gate, personnel shall ensure:

- Boarding equipment is operational.
- Boarding scanners are functional.
- Public announcement systems are operational.
- Passenger information displays are accurate.

- Security barriers are properly positioned.
- Emergency exits remain unobstructed.

Gate areas shall remain organized and safe throughout the boarding process.

4.5 PASSENGER MANIFEST REVIEW

Gate personnel shall review the passenger manifest before boarding begins.

The review shall include:

- Total passenger count.
- Special assistance passengers.
- Unaccompanied minors.
- VIP passengers.
- Standby passengers.
- Crew travelers.
- Security watchlist notifications.

Any discrepancy between manifest data and operational systems shall be resolved before boarding begins.

4.6 SPECIAL ASSISTANCE COORDINATION

Passengers requiring special assistance shall be identified before boarding.

Special assistance categories include:

- Wheelchair passengers.
- Passengers with reduced mobility.
- Medical assistance passengers.
- Elderly passengers.
- Hearing impaired passengers.
- Visually impaired passengers.

Coordination shall be completed with airport assistance personnel before boarding commences.

4.7 BOARDING ANNOUNCEMENTS

Boarding announcements shall provide passengers with clear instructions regarding:

- Boarding sequence.
- Gate information.
- Boarding requirements.
- Carry-on baggage restrictions.
- Final boarding times.

Announcements shall be professional, accurate, and timely.

Operational changes shall be communicated immediately.

4.8 PRIORITY BOARDING

Priority boarding may be provided to:

- Passengers requiring assistance.
- Unaccompanied minors.
- Families with small children.
- Premium cabin passengers.
- Loyalty program priority passengers.
- Authorized government personnel.

Priority boarding shall be conducted in an orderly manner without compromising security or operational efficiency.

4.9 BOARDING SEQUENCE MANAGEMENT

Boarding shall be conducted according to approved boarding groups.

Boarding groups may be organized based on:

- Cabin class.
- Loyalty status.
- Seat location.
- Special assistance requirements.
- Operational needs.

Personnel shall monitor passenger flow and prevent congestion within boarding areas.

4.10 BOARDING PASS VERIFICATION

Every passenger shall present a valid boarding pass before boarding.

Personnel shall verify:

- Passenger identity.
- Flight number.
- Departure date.
- Boarding authorization.
- Seat assignment.

Invalid, duplicate, altered, or unauthorized boarding passes shall be investigated immediately.

No passenger shall board without valid authorization.

4.11 IDENTITY VERIFICATION

Identity verification shall be conducted according to applicable security requirements.

Personnel shall ensure:

- Passenger identity matches boarding documentation.
- Travel documents remain valid.
- Security requirements have been satisfied.

Suspected identity fraud shall be immediately escalated to security authorities.

4.12 CARRY-ON BAGGAGE COMPLIANCE

Gate personnel shall monitor carry-on baggage compliance.

Carry-on baggage shall:

- Meet size requirements.
- Meet weight limitations.
- Comply with security restrictions.

Excess carry-on baggage may be transferred to checked baggage processing if operationally necessary.

Passengers shall be informed of any applicable restrictions before boarding.

4.13 STANDBY PASSENGER MANAGEMENT

Standby passengers shall only be cleared after confirmation of available seating capacity.

Standby processing shall include:

- Seat assignment.
- Manifest updates.
- Boarding authorization.
- Passenger notification.

Standby boarding shall be completed before final boarding closure whenever possible.

4.14 OVERBOOKING MANAGEMENT

In situations involving overbooked flights, personnel shall follow approved denied boarding procedures.

Priority shall be given to:

- Voluntary solutions.
- Rebooking options.
- Customer service recovery measures.

Involuntary denied boarding shall be managed according to regulatory requirements and company policy.

4.15 PASSENGER RECONCILIATION

Passenger reconciliation shall ensure that every boarded passenger is accounted for.

Reconciliation shall include verification of:

- Passenger manifest.
- Boarding records.
- Security records.
- Special assistance records.

All discrepancies shall be resolved before departure authorization.

4.16 NO-SHOW PASSENGERS

Passengers who fail to report for boarding before closure shall be classified as no-show passengers.

Personnel shall:

- Attempt passenger contact.
- Verify passenger status.
- Update operational records.

Any baggage associated with a no-show passenger shall be handled according to applicable security procedures.

4.17 SECURITY RECONCILIATION

Security reconciliation shall be completed before aircraft departure.

The reconciliation process shall ensure:

- All boarded passengers are authorized.
- No unauthorized passenger has boarded.
- Passenger and baggage records remain consistent.

Security discrepancies shall be resolved immediately.

4.18 FINAL BOARDING CALL

Final boarding announcements shall be made according to operational schedules.

Announcements shall identify:

- Remaining passengers.
- Boarding closure deadlines.
- Consequences of missed boarding.

Personnel shall document final boarding activities.

4.19 GATE CLOSURE PROCEDURES

Gate closure shall occur according to published operational schedules.

Before gate closure, personnel shall verify:

- Passenger reconciliation completion.
- Boarding completion.
- Manifest accuracy.
- Security reconciliation completion.

No additional passengers shall be accepted after gate closure unless authorized by operational control.

4.20 AIRCRAFT COMMUNICATIONS

Gate personnel shall communicate boarding status to:

- Flight crew.
- Ground operations.
- Operations Control Center.
- Dispatch personnel.

Information communicated shall include:

- Passenger count.
- Special assistance status.
- Boarding completion time.
- Operational concerns.

4.21 POST-BOARDING DOCUMENTATION

After boarding completion, personnel shall:

- Finalize passenger counts.
- Update manifests.
- Complete boarding reports.
- Document irregularities.

Operational records shall be retained according to company requirements.

4.22 BOARDING DELAYS

If boarding delays occur, personnel shall:

- Identify the cause.
- Communicate accurate information.
- Coordinate corrective actions.
- Escalate significant disruptions.

Passengers shall receive timely updates throughout the delay.

4.23 IRREGULAR BOARDING EVENTS

Irregular events may include:

- Aircraft substitutions.
- Gate changes.
- Security incidents.
- Passenger disturbances.
- System failures.
- Weather disruptions.

Personnel shall follow approved contingency procedures and maintain continuous communication with operational stakeholders.

4.24 PASSENGER MISCONDUCT DURING BOARDING

Passengers exhibiting disruptive, aggressive, intoxicated, or threatening behavior shall be evaluated before boarding authorization is granted.

Personnel shall:

- Assess safety risks.
- Notify supervisors.
- Coordinate with security personnel.
- Document all incidents.

Boarding may be denied when necessary to protect safety and security.

4.25 QUALITY ASSURANCE

Boarding performance shall be monitored through:

- Boarding completion times.
- On-time departure performance.
- Passenger reconciliation accuracy.
- Security compliance.
- Customer satisfaction indicators.
- Incident reporting trends.

Continuous improvement activities shall be implemented to enhance efficiency, compliance, safety, and customer experience.

-

5.1 PURPOSE

The purpose of Baggage Handling Operations is to ensure the safe, secure, accurate, and timely movement of passenger baggage from acceptance through delivery. Baggage operations shall support operational efficiency, passenger satisfaction, security compliance, and aircraft loading requirements. All baggage shall be processed in accordance with safety regulations, security requirements, and company procedures.

5.2 SCOPE

These procedures apply to all checked baggage, transfer baggage, special baggage, oversized baggage, crew baggage, delayed baggage, and mishandled baggage processed by Horizon Airlines. Baggage handling personnel shall maintain custody and accountability of baggage throughout the transportation process.

5.3 BAGGAGE ACCEPTANCE

Baggage acceptance begins during passenger check-in. Personnel shall verify baggage ownership before accepting baggage for transport. Each accepted bag shall receive a valid baggage tag containing destination information, flight details, and unique tracking identifiers. Baggage shall only be accepted from ticketed passengers with confirmed travel authorization.

Any baggage not properly tagged shall be removed from processing until discrepancies are resolved.

5.4 BAGGAGE IDENTIFICATION

Each baggage item shall be assigned a unique baggage identification number. Identification information shall be recorded within approved baggage tracking systems. Personnel shall verify that baggage tag information matches passenger reservation records and flight routing information.

Incorrect baggage tagging may result in delayed delivery, security concerns, and operational disruptions and shall be corrected immediately.

5.5 BAGGAGE SECURITY SCREENING

All baggage shall undergo required security screening before loading. Security screening may include X-ray inspection, explosive detection screening, manual inspection, or additional procedures required by local authorities.

Baggage failing security requirements shall not proceed further until clearance has been obtained.

Any suspicious item shall be immediately reported to airport security personnel and supervisors.

5.6 BAGGAGE SORTING OPERATIONS

Following acceptance and screening, baggage shall be sorted according to destination, flight number, transfer routing, and handling requirements.

Sorting personnel shall verify:

- Flight assignment.
- Destination coding.
- Priority baggage status.
- Transfer baggage status.
- Special handling requirements.

Incorrectly sorted baggage shall be immediately corrected.

5.7 TRANSFER BAGGAGE PROCESSING

Transfer baggage refers to baggage continuing onto a connecting flight.

Transfer baggage personnel shall:

- Verify onward flight information.
- Confirm baggage routing.
- Ensure transfer deadlines are met.
- Coordinate with connecting stations.

Priority shall be given to short connection baggage to minimize transfer failures.

5.8 PRIORITY BAGGAGE

Priority baggage includes:

- Premium cabin baggage.
- Frequent flyer priority baggage.
- Crew baggage.
- Operational priority baggage.

Priority baggage shall receive expedited handling and loading.

Priority handling procedures shall be monitored to ensure service standards are maintained.

5.9 SPECIAL BAGGAGE

Special baggage may include:

- Sporting equipment.
- Musical instruments.
- Medical equipment.
- Mobility aids.
- Fragile items.
- Oversized items.

Personnel shall apply appropriate handling tags and ensure special handling instructions accompany the baggage throughout processing.

Special baggage shall be protected from unnecessary damage or mishandling.

5.10 OVERSIZED BAGGAGE

Oversized baggage shall be processed separately from standard baggage streams.

Personnel shall verify:

- Weight limitations.
- Dimensional limitations.
- Aircraft compatibility.
- Loading requirements.

Oversized baggage requiring manual handling shall be moved using approved lifting procedures.

5.11 FRAGILE BAGGAGE

Fragile baggage shall be identified and tagged appropriately.

Examples include:

- Musical instruments.
- Electronic equipment.
- Artwork.
- Glass items.

Personnel shall exercise additional care during transportation and loading.

Fragile tags do not eliminate risk of damage but indicate special handling requirements.

5.12 MOBILITY AIDS

Wheelchairs and mobility devices shall receive special handling.

Personnel shall:

- Record condition before loading.
- Protect sensitive components.
- Secure equipment properly.
- Prioritize delivery upon arrival.

Mobility equipment shall be handled with the same level of care as medical equipment.

5.13 AIRCRAFT BAGGAGE LOADING

Before loading baggage, personnel shall review aircraft loading instructions.

Loading activities shall comply with:

- Weight and balance requirements.
- Load control instructions.
- Aircraft compartment limitations.
- Special handling requirements.

Improper loading may affect aircraft performance and safety.

5.14 WEIGHT AND BALANCE COORDINATION

Baggage loading shall support aircraft weight and balance requirements.

Personnel shall coordinate with load control personnel to ensure baggage distribution meets operational requirements.

Any discrepancy affecting aircraft balance shall be reported immediately.

Aircraft loading shall not proceed until corrected instructions are received.

5.15 LOADING SAFETY PROCEDURES

Personnel shall follow safe loading practices at all times.

Requirements include:

- Proper lifting techniques.
- Use of approved equipment.
- Compliance with ramp safety rules.
- Awareness of moving vehicles.

Unsafe loading conditions shall be reported immediately.

5.16 FINAL BAGGAGE RECONCILIATION

Before departure, baggage reconciliation shall confirm that baggage loaded onto the aircraft corresponds to accepted passengers.

Reconciliation shall verify:

- Passenger status.
- Baggage counts.
- Security requirements.
- Loading records.

Any discrepancy shall be resolved before departure authorization.

5.17 NO-SHOW BAGGAGE PROCEDURES

If a passenger fails to board, associated baggage shall be identified according to applicable security requirements.

Personnel shall:

- Locate affected baggage.
- Verify security requirements.
- Remove baggage if required.
- Update operational records.

No-show baggage procedures shall be completed before departure.

5.18 ARRIVAL BAGGAGE UNLOADING

Upon aircraft arrival, baggage shall be unloaded according to approved procedures.

Personnel shall prioritize:

- Mobility aids.

- Priority baggage.
- Transfer baggage.
- Standard baggage.

Baggage shall be transported promptly to designated delivery areas.

5.19 BAGGAGE DELIVERY

Baggage shall be delivered to passengers as quickly and accurately as possible.

Delivery operations shall ensure:

- Correct destination delivery.
- Accurate carousel assignment.
- Timely passenger communication.

Delays shall be minimized whenever possible.

5.20 DELAYED BAGGAGE

Delayed baggage occurs when baggage does not arrive on the same flight as the passenger.

Personnel shall:

- Create a baggage irregularity report.
- Verify passenger information.
- Initiate baggage tracing.
- Provide updates to passengers.

Every effort shall be made to reunite baggage with its owner promptly.

5.21 LOST BAGGAGE PROCEDURES

Baggage may be classified as lost when recovery efforts fail within established timelines.

Personnel shall:

- Conduct tracing investigations.

- Review baggage records.
- Coordinate with partner stations.
- Maintain passenger communication.

Compensation procedures shall follow applicable regulations and company policy.

5.22 DAMAGED BAGGAGE PROCEDURES

Passengers reporting baggage damage shall be assisted promptly.

Personnel shall:

- Inspect reported damage.
- Document findings.
- Create incident reports.
- Determine compensation eligibility.

Damage assessments shall be completed according to approved procedures.

5.23 UNCLAIMED BAGGAGE

Baggage remaining unclaimed after arrival shall be transferred to designated storage facilities.

Personnel shall:

- Verify ownership information.
- Attempt passenger contact.
- Maintain storage records.

Unclaimed baggage shall be handled according to regulatory and company requirements.

5.24 BAGGAGE INCIDENT REPORTING

The following events shall be documented:

- Lost baggage.

- Delayed baggage.
- Damaged baggage.
- Security incidents.
- Mishandling events.
- Tracking failures.

Incident reports shall be reviewed to identify recurring operational issues.

5.25 BAGGAGE TRACKING SYSTEMS

Approved baggage tracking systems shall be used to monitor baggage throughout its journey.

Tracking systems shall support:

- Acceptance records.
- Routing records.
- Loading records.
- Arrival records.
- Delivery confirmation.

System discrepancies shall be investigated immediately.

5.26 PERFORMANCE MONITORING

Baggage handling performance shall be monitored using:

- Mishandled baggage rates.
- Delivery times.
- Damage rates.
- Transfer success rates.
- Security compliance indicators.
- Passenger complaint trends.

Performance reviews shall support continuous improvement efforts.

5.27 CONTINUOUS IMPROVEMENT

Baggage handling operations shall be continuously reviewed to improve safety, efficiency, reliability, and customer satisfaction.

Operational audits, employee feedback, incident investigations, and performance data shall be used to identify opportunities for improvement and corrective action.

END OF SECTION 5 – BAGGAGE HANDLING OPERATIONS

SECTION 6

GROUND OPERATIONS & AIRCRAFT TURNAROUND OPERATIONS

Document ID: OPS-GND-001

Department: Ground Operations

Category: Ground Operations & Aircraft Turnaround

Priority: Critical

Version: 1.0

Reference Sources

- FAA Airport Operations Handbook
- IATA Ground Operations Practices
- Flight Operations Manual Template
- UK OTAC Operations Manual Guidance

6.1 PURPOSE

The purpose of Ground Operations and Aircraft Turnaround Operations is to ensure the safe, secure, efficient, and timely handling of aircraft while on the ground. Ground operations encompass all activities performed from the moment an aircraft arrives at its parking position until departure. Turnaround operations involve the coordinated execution of servicing activities required to prepare an aircraft for its next flight. All personnel involved in ground handling activities shall comply with approved operational procedures, safety requirements, security regulations, and aircraft manufacturer guidance.

6.2 SCOPE

Ground operations include aircraft arrival handling, marshalling, parking procedures, passenger disembarkation support, baggage handling coordination, catering support, fueling coordination, cabin servicing, aircraft cleaning, maintenance coordination, cargo handling, pushback operations, and departure preparation. These procedures apply to all Horizon Airlines aircraft and contracted ground handling personnel.

6.3 AIRCRAFT ARRIVAL PROCEDURES

Prior to aircraft arrival, ground personnel shall verify gate readiness, equipment availability, staffing assignments, and safety area conditions. Aircraft parking stands shall be inspected for foreign object debris, equipment obstructions, fluid contamination, and other hazards. Personnel shall ensure all required equipment is positioned safely and that aircraft movement areas remain clear.

Upon aircraft arrival, marshalling personnel shall guide the aircraft to the designated parking position using approved signals or docking guidance systems. Aircraft movement shall be continuously monitored to ensure safe clearance from obstacles, personnel, and equipment.

6.4 AIRCRAFT PARKING PROCEDURES

After the aircraft reaches its designated parking position, wheel chocks shall be installed according to approved procedures. Engine shutdown confirmation shall be obtained before personnel or equipment approach the aircraft. Safety cones shall be positioned around designated hazard areas including engines, wingtips, and aircraft control surfaces.

Ground personnel shall not approach the aircraft until authorization has been provided and all safety conditions have been satisfied.

6.5 GROUND SAFETY ZONES

Ground safety zones shall be established around parked aircraft. Restricted areas include engine danger zones, propeller hazard areas, jet blast zones, fueling zones, and aircraft movement paths.

Personnel shall remain aware of:

- Operating aircraft engines
- Aircraft movement
- Ground vehicles
- Fueling operations
- Aircraft servicing activities
- Weather conditions

Unauthorized personnel shall not enter restricted operational areas.

6.6 PASSENGER DISEMBARKATION SUPPORT

Following aircraft arrival, passenger disembarkation equipment shall be positioned safely. Jet bridges, stairs, and mobility assistance equipment shall be inspected prior to use.

Ground personnel shall coordinate with cabin crew to ensure orderly passenger movement. Passengers requiring assistance shall receive priority support.

Disembarkation activities shall be completed safely and efficiently while maintaining security requirements.

6.7 GROUND SUPPORT EQUIPMENT MANAGEMENT

Ground Support Equipment (GSE) includes:

- Passenger stairs
- Belt loaders
- Pushback tractors
- Ground power units
- Air conditioning units
- Baggage carts
- Tow bars
- Service vehicles

Equipment shall be inspected before use and maintained in safe operating condition. Defective equipment shall be removed from service immediately.

6.8 BAGGAGE UNLOADING OPERATIONS

Upon arrival, baggage unloading shall begin only after aircraft safety procedures have been completed. Baggage shall be unloaded according to approved loading plans and handling requirements.

Priority baggage, mobility aids, transfer baggage, and special baggage shall receive expedited processing where required.

Personnel shall ensure baggage is protected from damage and accurately transferred to designated processing areas.

6.9 CARGO AND MAIL HANDLING

Cargo and mail shipments shall be unloaded, transferred, and loaded according to approved procedures. Personnel shall verify shipment documentation, handling requirements, security status, and destination information.

Special cargo categories requiring additional controls shall be handled according to applicable regulations and company procedures.

6.10 AIRCRAFT CLEANING OPERATIONS

Aircraft cleaning activities shall begin after passenger disembarkation and safety clearance.

Cleaning personnel shall:

- Remove waste materials.
- Clean passenger seating areas.
- Clean lavatories.
- Replenish cabin supplies.
- Inspect cabin condition.

Cleaning activities shall be completed within scheduled turnaround timelines while maintaining quality standards.

6.11 WATER AND WASTE SERVICING

Aircraft servicing may include potable water replenishment and lavatory waste servicing.

Personnel shall:

- Use approved servicing equipment.
- Follow hygiene requirements.
- Prevent contamination.
- Document servicing completion.

Servicing activities shall comply with environmental and health regulations.

6.12 CATERING OPERATIONS

Catering personnel shall coordinate delivery and loading of food, beverages, and service supplies.

Catering activities shall include:

- Removal of used supplies.
- Loading of required inventory.
- Verification of catering quantities.
- Documentation of catering services.

Food safety standards shall be maintained throughout all catering activities.

6.13 FUELING OPERATIONS

Aircraft fueling shall only be conducted by authorized personnel.

Prior to fueling:

- Aircraft grounding procedures shall be completed.
- Fire safety requirements shall be verified.
- Fuel quantities shall be confirmed.
- Communication channels shall be established.

During fueling, personnel shall continuously monitor operations for leaks, equipment malfunctions, fire hazards, or safety concerns.

Any fueling abnormality shall result in immediate suspension of fueling activities until resolved.

6.14 MAINTENANCE COORDINATION DURING TURNAROUND

Maintenance personnel shall evaluate reported aircraft defects, scheduled maintenance requirements, and operational limitations during turnaround activities.

Maintenance actions may include:

- Technical inspections.
- Component replacement.
- System testing.
- Defect rectification.

Maintenance activities shall be coordinated to minimize operational disruption while maintaining airworthiness requirements.

6.15 AIRCRAFT SERVICING COORDINATION

Turnaround coordinators shall monitor all servicing activities to ensure completion within scheduled timelines.

Activities requiring coordination include:

- Fueling.
- Catering.
- Cleaning.
- Baggage loading.
- Cargo loading.
- Maintenance support.

Potential delays shall be communicated immediately to operational control personnel.

6.16 DEPARTURE PREPARATION

Prior to departure, personnel shall verify completion of all turnaround activities.

Verification shall include:

- Passenger boarding status.
- Baggage loading completion.
- Cargo loading completion.
- Fueling completion.
- Maintenance release status.
- Aircraft documentation status.

Any unresolved issue shall be escalated before departure authorization.

6.17 LOAD CONTROL COORDINATION

Ground operations personnel shall coordinate with load control personnel to ensure aircraft loading complies with weight and balance requirements.

Loading instructions shall be followed precisely.

Any discrepancy affecting aircraft balance, structural limitations, or operational safety shall be reported immediately.

6.18 FINAL WALKAROUND INSPECTION

Before departure, designated personnel shall conduct a final walkaround inspection.

The inspection shall verify:

- Equipment removal.
- Cargo door security.
- Baggage compartment security.
- Absence of leaks.
- Absence of foreign object debris.
- Aircraft exterior condition.

Any abnormal condition shall be investigated before departure.

6.19 PUSHBACK PREPARATION

Before pushback operations begin, personnel shall verify:

- Passenger boarding completion.
- Aircraft door closure.
- Equipment removal.
- Pushback route clearance.
- Communication with flight crew.

Pushback operations shall only commence after receiving required authorization.

6.20 PUSHBACK OPERATIONS

Pushback shall be performed by trained personnel using approved equipment and procedures.

Communication between pushback personnel and flight crew shall be maintained throughout the operation.

Any abnormal condition shall result in immediate suspension of pushback until corrective action is completed.

6.21 TURNAROUND PERFORMANCE MONITORING

Turnaround performance shall be monitored through:

- On-time departure performance.
- Ground delay statistics.
- Safety performance indicators.
- Equipment reliability metrics.
- Service quality indicators.

Performance data shall be reviewed regularly to identify opportunities for improvement.

6.22 IRREGULAR TURNAROUND OPERATIONS

Irregular events may include:

- Equipment failures.
- Weather disruptions.
- Fueling delays.
- Maintenance delays.
- Passenger disruptions.
- Security incidents.

Personnel shall follow approved contingency procedures and coordinate corrective actions to minimize operational impact.

6.23 CONTINUOUS IMPROVEMENT

Ground operations and turnaround procedures shall be reviewed periodically through audits, inspections, safety reviews, operational analysis, and performance monitoring.

Lessons learned from incidents, delays, disruptions, and operational reviews shall be incorporated into future procedures to improve safety, efficiency, reliability, and service quality.

END OF SECTION 6 – GROUND OPERATIONS & AIRCRAFT TURNAROUND OPERATIONS

SECTION 7

DISPATCH & FLIGHT PLANNING

Document ID: OPS-DSP-001

Department: Flight Dispatch

Category: Dispatch & Flight Planning

Priority: Critical

Version: 1.0

Reference Sources

- FAA Flight Dispatch Guidance
 - FAA Airport Operations Handbook
 - Flight Operations Manual Template
 - UK OTAC Operations Manual Guidance
-

7.1 PURPOSE

The purpose of Dispatch and Flight Planning Operations is to ensure that every flight is planned, authorized, monitored, and supported in accordance with regulatory requirements, operational limitations, safety standards, and company policies. Flight dispatch personnel are responsible for evaluating operational conditions, assessing risks, coordinating resources, and providing flight crews with the information required for safe and efficient operations.

7.2 SCOPE

Dispatch responsibilities include flight planning, route analysis, fuel planning, weather assessment, airport suitability review, NOTAM analysis, operational risk assessment, flight release preparation, operational monitoring, and coordination with operational stakeholders.

Dispatch personnel serve as the primary operational planning authority before departure.

7.3 FLIGHT SCHEDULING REVIEW

Prior to flight planning, dispatch personnel shall review:

- Flight schedules.
- Aircraft assignments.
- Crew assignments.
- Airport operating hours.
- Slot restrictions.
- Operational notices.

Any operational conflict shall be identified and resolved before flight release.

7.4 ROUTE PLANNING

Dispatch personnel shall select routes based on:

- Operational efficiency.
- Air traffic restrictions.
- Weather conditions.
- Fuel efficiency.
- Airspace availability.
- Regulatory requirements.

Flight routes shall comply with approved navigation procedures and operational limitations.

7.5 WEATHER ANALYSIS

Weather assessments shall include:

- Departure airport conditions.
- Destination airport conditions.
- Alternate airport conditions.
- Enroute weather.
- Convective activity.
- Turbulence forecasts.
- Wind conditions.
- Visibility restrictions.

Weather information shall be continuously monitored throughout the planning process.

7.6 NOTAM REVIEW

Dispatch personnel shall review all applicable Notices to Air Missions (NOTAMs).

Review areas include:

- Runway closures.
- Taxiway closures.
- Navigation aid outages.
- Airport construction.
- Airspace restrictions.
- Temporary procedures.

Operational impacts shall be assessed before flight release.

7.7 AIRCRAFT PERFORMANCE ANALYSIS

Aircraft performance calculations shall consider:

- Aircraft type.
- Aircraft weight.
- Runway conditions.
- Temperature.
- Elevation.
- Wind conditions.
- Operational restrictions.

Dispatch personnel shall ensure the aircraft can safely operate within all performance limitations.

7.8 FUEL PLANNING

Fuel planning shall ensure sufficient fuel is carried for:

- Taxi operations.
- Trip fuel.
- Contingency fuel.
- Alternate fuel.
- Holding fuel.
- Regulatory reserves.

Additional fuel may be authorized when operational conditions indicate increased risk.

7.9 ALTERNATE AIRPORT SELECTION

Suitable alternate airports shall be selected when required.

Selection criteria include:

- Weather suitability.
- Runway capability.
- Operational status.
- Aircraft compatibility.
- Fuel requirements.

Alternate airports shall remain available throughout the planned operation.

7.10 FLIGHT RELEASE PREPARATION

Dispatch personnel shall prepare a flight release containing:

- Flight routing.
- Fuel requirements.
- Weather information.
- NOTAM information.
- Operational restrictions.
- Aircraft information.

The flight release serves as official authorization for flight operations.

7.11 FLIGHT CREW BRIEFING

Flight crews shall receive all operationally significant information before departure.

Briefing topics may include:

- Weather concerns.
- Fuel considerations.
- Airport restrictions.
- Aircraft limitations.
- Operational risks.

Questions and concerns shall be addressed before departure authorization.

7.12 OPERATIONAL RISK ASSESSMENT

Dispatch personnel shall evaluate operational risks associated with:

- Weather.
- Maintenance limitations.
- Airport conditions.
- Crew limitations.
- Security concerns.
- Airspace restrictions.

Risk mitigation measures shall be implemented when necessary.

7.13 PRE-DEPARTURE MONITORING

Prior to departure, dispatch personnel shall monitor:

- Aircraft readiness.
- Crew readiness.
- Weather developments.
- Airport conditions.
- Fuel status.
- Maintenance status.

Any significant change shall trigger reassessment of operational suitability.

7.14 ENROUTE FLIGHT MONITORING

After departure, dispatch personnel shall continue monitoring:

- Flight progress.
- Weather conditions.
- Airspace restrictions.
- Fuel consumption.
- Operational deviations.

Operational support shall be provided throughout the flight.

7.15 FLIGHT DIVERSION SUPPORT

If a diversion becomes necessary, dispatch personnel shall:

- Identify suitable diversion airports.
- Evaluate operational conditions.
- Coordinate ground support.
- Provide information to flight crews.

Diversion decisions shall prioritize safety.

7.16 IRREGULAR OPERATIONS

Dispatch personnel shall coordinate responses to:

- Delays.
- Diversions.
- Cancellations.
- Aircraft substitutions.
- Airport closures.
- Weather disruptions.

Operational recovery plans shall be developed to minimize disruption.

7.17 POST-FLIGHT REVIEW

Following flight completion, dispatch personnel shall review:

- Operational performance.
- Fuel performance.
- Weather impacts.
- Delays.
- Operational deviations.

Lessons learned shall be incorporated into future planning activities.

7.18 PERFORMANCE MONITORING

Dispatch performance shall be monitored through:

- On-time performance.
- Fuel efficiency.

- Diversion rates.
 - Delay statistics.
 - Regulatory compliance.
 - Operational safety indicators.
-

END OF SECTION 7 – DISPATCH & FLIGHT PLANNING

SECTION 8

OPERATIONS CONTROL CENTER (OCC) OPERATIONS

Document ID: OPS-OCC-001

Department: Operations Control Center

Category: Operational Control

Priority: Critical

Version: 1.0

Reference Sources

- FAA Operational Control Guidance
 - Flight Operations Manual Template
 - UK OTAC Operations Manual Guidance
 - Airline Operations Control Best Practices
-

8.1 PURPOSE

The Operations Control Center (OCC) serves as the central command and coordination facility responsible for maintaining operational awareness and ensuring the safe, efficient, and continuous execution of airline operations. The OCC provides real-time monitoring, decision-making, communication, disruption management, and operational recovery support across the airline network.

8.2 SCOPE

The OCC is responsible for:

- Flight monitoring.
- Network monitoring.
- Operational recovery.
- Resource coordination.
- Crew coordination.
- Aircraft utilization.
- Disruption management.
- Emergency coordination.

The OCC maintains oversight of all active airline operations.

8.3 OCC ORGANIZATIONAL STRUCTURE

The OCC may consist of:

- OCC Manager.
- Flight Operations Coordinators.
- Dispatch Personnel.
- Crew Controllers.
- Maintenance Controllers.
- Network Controllers.
- Operational Support Specialists.

Each role contributes to maintaining operational continuity and situational awareness.

8.4 OPERATIONAL MONITORING

The OCC shall continuously monitor:

- Aircraft locations.
- Flight status.
- Airport conditions.
- Weather conditions.
- Crew status.
- Maintenance status.
- Passenger disruptions.
- Security concerns.

Operational information shall be updated in real time whenever possible.

8.5 FLIGHT TRACKING

The OCC shall monitor flights from departure until arrival.

Monitoring shall include:

- Off-block times.
- Departure times.
- Enroute progress.
- Estimated arrival times.
- Gate assignments.
- Operational deviations.

Significant deviations shall be investigated immediately.

8.6 NETWORK MANAGEMENT

Network management responsibilities include:

- Schedule integrity.
- Aircraft positioning.
- Resource allocation.
- Operational recovery planning.
- Capacity management.

Operational decisions shall consider impacts across the entire airline network.

8.7 AIRCRAFT UTILIZATION MANAGEMENT

The OCC shall monitor aircraft utilization to maximize operational efficiency.

Monitoring activities include:

- Aircraft assignments.
- Aircraft rotations.
- Ground times.

- Maintenance requirements.
- Fleet availability.

Aircraft substitutions may be coordinated when necessary.

8.8 CREW CONTROL

Crew controllers shall monitor:

- Duty times.
- Rest requirements.
- Crew availability.
- Qualification requirements.
- Crew disruptions.

Crew assignments shall remain compliant with regulatory requirements.

8.9 MAINTENANCE CONTROL COORDINATION

The OCC shall coordinate with maintenance control regarding:

- Aircraft defects.
- Maintenance delays.
- Aircraft availability.
- Technical restrictions.

Maintenance impacts shall be incorporated into operational planning.

8.10 WEATHER MONITORING

The OCC shall continuously monitor:

- Thunderstorms.
- Fog.
- Snow.
- Tropical systems.

- Wind conditions.
- Volcanic activity.
- Airspace impacts.

Weather information shall support operational decision-making.

8.11 DELAY MANAGEMENT

The OCC shall coordinate responses to operational delays.

Delay management responsibilities include:

- Cause identification.
- Resource allocation.
- Passenger impact assessment.
- Recovery planning.

Delays shall be minimized whenever safely possible.

8.12 CANCELLATION MANAGEMENT

When flight cancellations become necessary, the OCC shall:

- Coordinate affected departments.
- Reassign resources.
- Support passenger recovery.
- Manage schedule impacts.

Cancellation decisions shall prioritize safety and operational stability.

8.13 DIVERSION MANAGEMENT

Diversions may occur due to:

- Weather.
- Medical emergencies.
- Security concerns.
- Technical issues.
- Airport closures.

The OCC shall coordinate all required support activities and maintain communication with flight crews.

8.14 RESOURCE ALLOCATION

The OCC shall coordinate allocation of:

- Aircraft.
- Crew members.
- Gates.
- Ground resources.
- Maintenance resources.

Resource decisions shall support operational continuity.

8.15 OPERATIONAL COMMUNICATIONS

The OCC serves as the primary operational communication hub.

Communication shall be maintained with:

- Flight crews.
- Airports.
- Ground handlers.
- Maintenance personnel.
- Executive management.
- Security authorities.

Information shall be timely, accurate, and documented when required.

8.16 CRISIS MANAGEMENT SUPPORT

During major disruptions, the OCC shall support:

- Emergency response.
- Business continuity.
- Operational recovery.
- Stakeholder communication.

Crisis management activities shall follow approved emergency procedures.

8.17 PERFORMANCE MONITORING

The OCC shall monitor:

- On-time performance.
- Fleet utilization.
- Delay trends.
- Cancellation rates.
- Recovery effectiveness.
- Operational reliability.

Performance data shall support continuous improvement initiatives.

8.18 POST-EVENT REVIEW

Following significant disruptions, the OCC shall conduct reviews to identify:

- Root causes.
- Operational weaknesses.
- Corrective actions.
- Improvement opportunities.

Findings shall be documented and tracked to completion.

END OF SECTION 8 – OPERATIONS CONTROL CENTER (OCC) OPERATIONS

SECTION 9

CREW MANAGEMENT

Document ID: OPS-CRM-001

Department: Crew Operations

Category: Crew Management

Priority: Critical

Version: 1.0

Reference Sources

- FAA Flight Crew Duty Regulations
 - Flight Operations Manual Template
 - UK OTAC Operations Manual Guidance
-

9.1 PURPOSE

The purpose of Crew Management is to ensure that qualified, rested, medically fit, and properly trained personnel are assigned to flight operations. Crew management activities support operational continuity, regulatory compliance, safety, and efficient utilization of personnel resources.

9.2 SCOPE

Crew Management includes:

- Crew scheduling
- Crew rostering
- Duty time monitoring
- Rest period management
- Qualification tracking
- Crew disruptions
- Crew recovery planning
- Training coordination

These procedures apply to flight crew, cabin crew, and operational crew personnel.

9.3 CREW SCHEDULING

Crew schedules shall be developed to support operational requirements while ensuring compliance with regulatory limitations.

Scheduling considerations include:

- Flight schedules
- Aircraft assignments
- Crew qualifications

- Duty limitations
 - Rest requirements
 - Training requirements
-

9.4 QUALIFICATION MANAGEMENT

Crew members shall possess valid qualifications appropriate for assigned duties.

Qualification records shall include:

- Licenses
- Ratings
- Medical certificates
- Training certifications
- Recurrent training status

Personnel with expired qualifications shall not be assigned operational duties.

9.5 DUTY TIME LIMITATIONS

Crew duty periods shall comply with applicable regulations and company policy.

Duty time monitoring shall consider:

- Flight duty periods
- Ground duty periods
- Reserve assignments
- Positioning duties
- Extended operations

Duty limitations shall not be exceeded without authorized emergency provisions.

9.6 REST REQUIREMENTS

Crew members shall receive adequate rest before operational duties.

Rest periods shall be monitored to ensure:

- Regulatory compliance

- Fatigue mitigation
- Operational readiness

Any crew member reporting fatigue shall be evaluated before assignment.

9.7 CREW BRIEFINGS

Prior to duty commencement, crew members shall receive operational briefings covering:

- Flight schedules
- Weather conditions
- Aircraft status
- Operational restrictions
- Safety concerns

Briefings shall ensure situational awareness and operational preparedness.

9.8 CREW DISRUPTIONS

Crew disruptions may include:

- Illness
- Fatigue reports
- Transportation delays
- Qualification issues
- Scheduling conflicts

Crew controllers shall coordinate replacement personnel when required.

9.9 CREW RECOVERY

Following operational disruptions, crew management personnel shall develop recovery plans to restore operational stability.

Recovery measures may include:

- Crew reassignment
- Reserve crew activation
- Schedule adjustments

- Positioning flights
-

9.10 PERFORMANCE MONITORING

Crew management performance shall be monitored through:

- Duty compliance
- Training completion rates
- Fatigue reports
- Crew availability
- Schedule reliability

Continuous improvement initiatives shall support operational efficiency and safety.

END OF SECTION 9 – CREW MANAGEMENT

SECTION 10

SAFETY MANAGEMENT SYSTEM (SMS)

Document ID: OPS-SMS-001

Department: Safety Department

Category: Safety Management System

Priority: Critical

Version: 1.0

Reference Sources

- ICAO Safety Management Manual
 - FAA Safety Management System Guidance
 - Flight Operations Manual Template
-

10.1 PURPOSE

The Safety Management System provides a structured framework for identifying hazards, assessing risks, implementing controls, monitoring performance, and continuously improving operational safety throughout Horizon Airlines.

Safety shall be integrated into all operational activities and decision-making processes.

10.2 SAFETY POLICY

Horizon Airlines is committed to maintaining the highest practical level of operational safety.

The organization shall:

- Promote proactive safety management.
 - Encourage safety reporting.
 - Investigate incidents.
 - Implement corrective actions.
 - Continuously improve safety performance.
-

10.3 HAZARD IDENTIFICATION

Personnel shall report hazards that may affect:

- Flight operations
- Ground operations
- Maintenance activities
- Security operations
- Passenger safety

Hazards may be identified through observations, audits, inspections, reports, or operational reviews.

10.4 SAFETY REPORTING

All employees shall have access to safety reporting systems.

Reports may involve:

- Hazards
- Near misses
- Incidents
- Operational concerns
- Unsafe conditions

Personnel shall be encouraged to report safety concerns without fear of retaliation.

10.5 RISK ASSESSMENT

Reported hazards shall undergo risk assessment.

Risk evaluations shall consider:

- Probability of occurrence
- Potential consequences
- Existing controls
- Operational exposure

Appropriate mitigation measures shall be implemented when required.

10.6 SAFETY RISK CONTROLS

Risk controls may include:

- Procedural changes
- Training improvements
- Equipment modifications
- Additional supervision
- Operational restrictions

Control effectiveness shall be periodically reviewed.

10.7 INCIDENT INVESTIGATION

Safety incidents shall be investigated to determine:

- Root causes
- Contributing factors
- Corrective actions
- Preventive measures

Investigations shall focus on learning and improvement rather than assigning blame.

10.8 SAFETY PERFORMANCE MONITORING

The Safety Department shall monitor:

- Incident rates
- Hazard trends
- Audit findings
- Compliance levels
- Safety performance indicators

Performance data shall support continuous improvement.

10.9 SAFETY AUDITS

Audits shall evaluate compliance with:

- Company procedures
- Regulatory requirements
- Operational standards
- Safety objectives

Audit findings shall be documented and tracked until resolution.

10.10 SAFETY PROMOTION

Safety promotion activities may include:

- Safety briefings
- Training programs
- Safety campaigns
- Lessons learned publications

Personnel shall be encouraged to actively participate in safety initiatives.

10.11 EMERGENCY PREPAREDNESS

The SMS shall support emergency preparedness through:

- Emergency planning
- Training exercises
- Coordination activities
- Resource planning

Preparedness activities shall be reviewed periodically.

10.12 CONTINUOUS IMPROVEMENT

The SMS shall continuously evolve through:

- Hazard reporting
- Risk assessments
- Audits
- Investigations
- Performance reviews

Safety performance shall be reviewed regularly to identify improvement opportunities.

END OF SECTION 10 – SAFETY MANAGEMENT SYSTEM

SECTION 11

MAINTENANCE COORDINATION

Document ID: OPS-MNT-001

Department: Technical Operations

Category: Maintenance Coordination

Priority: Critical

Version: 1.0

Reference Sources

- FAA Maintenance Guidance
 - Aircraft Manufacturer Maintenance Documentation
 - Flight Operations Manual Template
-

11.1 PURPOSE

The purpose of Maintenance Coordination is to ensure aircraft remain airworthy, safe, and available for operational use through effective coordination between flight operations, maintenance personnel, operational control, and engineering departments.

11.2 SCOPE

Maintenance coordination activities include:

- Defect management
- Maintenance planning
- Airworthiness monitoring
- Maintenance scheduling
- Aircraft release procedures
- Technical communications

These procedures apply to all aircraft operated by Horizon Airlines.

11.3 AIRWORTHINESS RESPONSIBILITIES

Aircraft shall only be operated when they meet applicable airworthiness requirements.

Maintenance personnel shall ensure:

- Required inspections are completed.
 - Defects are evaluated.
 - Maintenance actions are documented.
 - Airworthiness status is maintained.
-

11.4 DEFECT REPORTING

Aircraft defects may be reported by:

- Flight crews

- Maintenance personnel
- Ground personnel
- Operational inspectors

Defects shall be documented accurately and evaluated promptly.

11.5 DEFECT EVALUATION

Reported defects shall be assessed to determine:

- Safety impact
- Operational impact
- Repair requirements
- Dispatch limitations

Defects affecting airworthiness shall be addressed before further operation.

11.6 MAINTENANCE PLANNING

Maintenance planning shall ensure required work is completed within approved intervals.

Planning activities include:

- Scheduled maintenance
- Inspections
- Component replacements
- Engineering modifications

Maintenance schedules shall be coordinated with operational requirements whenever possible.

11.7 MAINTENANCE CONTROL

Maintenance Control shall monitor:

- Fleet airworthiness
- Defect status
- Maintenance progress
- Aircraft availability

Maintenance Control shall communicate significant technical issues to operational stakeholders.

11.8 DEFERRED DEFECT MANAGEMENT

Certain defects may be deferred in accordance with approved procedures.

Deferred defects shall:

- Be documented.
 - Be monitored.
 - Comply with approved limitations.
 - Be corrected within required timelines.
-

11.9 AIRCRAFT RELEASE TO SERVICE

Before aircraft release, maintenance personnel shall verify:

- Required maintenance completion.
- Documentation accuracy.
- Airworthiness status.
- Operational suitability.

Release authority shall be exercised only by authorized personnel.

11.10 TECHNICAL COMMUNICATIONS

Maintenance personnel shall maintain communication with:

- Flight crews
- OCC personnel
- Dispatch personnel
- Engineering personnel

Timely communication supports safe operational decision-making.

11.11 UNSCHEDULED MAINTENANCE EVENTS

Unscheduled maintenance may result from:

- Technical failures
- Inspection findings
- Operational reports
- Component malfunctions

Operational impacts shall be assessed and communicated promptly.

11.12 PERFORMANCE MONITORING

Maintenance performance shall be monitored through:

- Aircraft reliability
- Defect rates
- Maintenance delays
- Technical dispatch reliability
- Airworthiness compliance

Performance data shall support continuous improvement initiatives.

END OF SECTION 11 – MAINTENANCE COORDINATION

SECTION 12

SECURITY OPERATIONS

Document ID: OPS-SEC-001

Department: Security Operations

Category: Security Management

Priority: Critical

Version: 1.0

Reference Sources

- ICAO Annex 17 Security Standards
 - FAA Security Guidance
 - Airport Security Program Best Practices
 - Flight Operations Manual Template
-

12.1 PURPOSE

The purpose of Security Operations is to protect passengers, crew members, aircraft, facilities, information systems, cargo, baggage, and operational assets from unlawful interference, security threats, criminal activity, sabotage, terrorism, and unauthorized access. Security procedures shall be integrated into all operational activities and coordinated with airport authorities, law enforcement agencies, regulatory authorities, and operational departments.

12.2 ACCESS CONTROL PROCEDURES

Access to operational areas shall be restricted to authorized personnel.

Personnel entering restricted areas shall:

- Display valid identification.
- Present airport access credentials.
- Comply with screening requirements.
- Follow escort requirements when applicable.

Unauthorized individuals shall be denied access and reported immediately.

12.3 RESTRICTED AREA SECURITY

Restricted areas include:

- Aircraft parking stands.
- Ramp areas.
- Baggage facilities.
- Cargo facilities.
- Maintenance facilities.
- OCC facilities.

Personnel shall continuously monitor restricted areas for suspicious activity, unauthorized access, unattended items, and security vulnerabilities.

12.4 AIRCRAFT SECURITY INSPECTIONS

Aircraft security inspections shall be conducted:

- Before first flight of the day.
- After extended ground periods.
- Following security incidents.
- When directed by authorities.

Inspections shall include:

- Cabin areas.
- Lavatories.
- Galleys.
- Cargo compartments.
- Flight deck areas.
- Service compartments.

Any suspicious item shall result in immediate suspension of operations until security clearance is obtained.

12.5 SUSPICIOUS PERSON PROCEDURE

Personnel identifying suspicious individuals shall:

1. Observe behavior.
2. Avoid confrontation unless required.
3. Notify supervisors.
4. Notify security personnel.
5. Document observations.

Indicators may include:

- Unauthorized access attempts.
- Surveillance activity.
- Unusual photography.
- Threatening behavior.

- Identity discrepancies.
-

12.6 UNATTENDED ITEM PROCEDURE

Any unattended item shall be treated as potentially hazardous.

Personnel shall:

1. Establish a safety perimeter.
2. Prevent public access.
3. Notify security personnel.
4. Document location and time.
5. Await further instructions.

Personnel shall not touch or move suspicious items.

12.7 BOMB THREAT RESPONSE

Upon receiving a bomb threat:

1. Remain calm.
2. Record information.
3. Notify OCC.
4. Notify airport security.
5. Notify law enforcement.

Operations may be suspended pending security assessment.

Aircraft, terminals, and operational facilities may be evacuated if required.

12.8 PASSENGER SECURITY INCIDENTS

Passengers may be denied travel due to:

- Threatening behavior.
- Violence.
- Intoxication.
- Security concerns.
- Identity discrepancies.

Security personnel shall coordinate with operational personnel to ensure safe resolution.

12.9 SECURITY INCIDENT REPORTING

All security incidents shall be documented.

Reports shall include:

- Time.
- Location.
- Personnel involved.
- Description.
- Actions taken.
- Outcome.

Security reports shall be retained according to regulatory requirements.

12.10 CYBERSECURITY AWARENESS

Personnel shall protect operational systems from unauthorized access.

Security measures include:

- Password protection.
- Access controls.
- System monitoring.
- Incident reporting.

Suspected cybersecurity incidents shall be reported immediately.

12.11 SECURITY AUDITS

Security audits shall evaluate:

- Access control effectiveness.
- Security compliance.
- Incident trends.
- Procedural effectiveness.

Corrective actions shall be tracked until completion.

END OF SECTION 12 – SECURITY OPERATIONS

SECTION 13

WEATHER DISRUPTION MANAGEMENT

Document ID: OPS-WTH-001

Department: Operations Control Center

Category: Weather Disruption Management

Priority: Critical

Version: 1.0

Reference Sources

- FAA Weather Operations Guidance
 - ICAO Operational Meteorology Guidance
 - Flight Operations Manual Template
 - Airline Irregular Operations Best Practices
-

13.1 PURPOSE

The purpose of Weather Disruption Management is to ensure safe airline operations during adverse meteorological conditions. Weather disruptions may affect flight safety, airport operations, aircraft performance, crew scheduling, passenger handling, and network stability. All weather-related decisions shall prioritize safety over schedule performance.

13.2 WEATHER MONITORING

The OCC shall continuously monitor:

- Departure airport weather.
- Destination airport weather.
- Alternate airport weather.
- Enroute weather conditions.

- Tropical systems.
- Thunderstorms.
- Low visibility conditions.
- Wind conditions.

Weather information shall be reviewed continuously throughout operational periods.

13.3 WEATHER ALERT PROCEDURES

When significant weather is forecast:

1. OCC shall issue operational alerts.
2. Dispatch shall review affected flights.
3. Crew scheduling shall evaluate potential impacts.
4. Ground operations shall prepare contingency measures.
5. Passenger services shall prepare communication plans.

Weather alerts shall remain active until operational risk is reduced.

13.4 THUNDERSTORM OPERATIONS

Thunderstorms present risks including:

- Lightning strikes.
- Wind shear.
- Turbulence.
- Heavy rainfall.
- Reduced visibility.
- Hail.

When thunderstorms are present:

- Aircraft routing may be modified.
- Ground operations may be restricted.
- Fuel planning may be adjusted.
- Departure delays may be implemented.

Safety considerations shall override schedule performance.

13.5 LIGHTNING PROCEDURES

When lightning is detected within established airport safety limits:

1. Ramp operations shall be suspended.
2. Fueling operations shall cease.
3. Aircraft loading shall stop.
4. Personnel shall move to designated shelters.

Operations shall only resume after receiving clearance from airport authorities or safety management personnel.

13.6 LOW VISIBILITY OPERATIONS

Low visibility may result from:

- Fog.
- Heavy rain.
- Smoke.
- Dust.
- Haze.

When visibility falls below operational minima:

- Additional spacing may be required.
- Taxi operations may be restricted.
- Delays may increase.
- Diversions may become necessary.

Flight crews shall be provided with updated visibility information continuously.

13.7 HIGH WIND OPERATIONS

Strong winds may affect:

- Aircraft performance.
- Ground equipment.
- Passenger boarding.
- Aircraft parking.

Ground personnel shall secure loose equipment and monitor wind-related hazards.

Aircraft exceeding operational crosswind limits shall not be dispatched until conditions improve.

13.8 TROPICAL STORM AND CYCLONE RESPONSE

When tropical systems threaten operational areas:

1. OCC shall activate disruption planning.
2. Aircraft repositioning may be initiated.
3. Flight schedules may be modified.
4. Airport closures shall be monitored.
5. Passenger recovery plans shall be prepared.

Aircraft shall not be exposed to unacceptable storm risk.

13.9 SNOW AND ICE OPERATIONS

When snow or ice conditions exist:

- Aircraft deicing requirements shall be assessed.
- Runway conditions shall be monitored.
- Ground movement restrictions may apply.
- Additional delays may occur.

No aircraft shall depart with contamination exceeding approved limits.

13.10 WEATHER DIVERSION PROCEDURES

A diversion may be required when:

- Destination weather falls below minima.
- Runways become unavailable.
- Safety margins are reduced.

When a diversion is initiated:

1. Dispatch shall identify suitable alternates.
 2. OCC shall coordinate support.
 3. Ground handling shall be arranged.
 4. Passenger services shall prepare recovery plans.
-

13.11 AIRPORT CLOSURE RESPONSE

If an airport becomes unavailable:

1. Affected flights shall be evaluated.
2. Diversion plans shall be activated.
3. Passenger notifications shall begin.
4. Crew recovery planning shall commence.

Operational recovery efforts shall begin immediately.

13.12 POST-WEATHER RECOVERY

Following severe weather:

- Aircraft inspections may be required.
- Schedule recovery plans shall be activated.
- Passenger recovery plans shall be implemented.
- Operational performance shall be reviewed.

Lessons learned shall be incorporated into future planning.

13.13 PERFORMANCE REVIEW

Weather disruption performance shall be evaluated through:

- Delay statistics.
- Diversion rates.
- Passenger recovery times.
- Operational recovery effectiveness.
- Safety performance indicators.

SECTION 14

DELAY, DIVERSION & CANCELLATION MANAGEMENT

Document ID: OPS-IRR-001

Department: Operations Control Center

Category: Irregular Operations Management

Priority: Critical

Version: 1.0

Reference Sources

- FAA Operational Control Guidance
- IATA Irregular Operations Practices
- Flight Operations Manual Template
- Airline Recovery Operations Best Practices

14.1 PURPOSE

The purpose of Delay, Diversion, and Cancellation Management is to minimize operational disruption, maintain safety, support passengers, protect operational continuity, and facilitate rapid recovery following irregular operational events.

14.2 IRREGULAR OPERATIONS DEFINITION

Irregular Operations (IROPS) include:

- Flight delays.
- Flight diversions.
- Flight cancellations.

- Aircraft substitutions.
- Airport closures.
- Severe weather disruptions.
- Security events.
- Technical failures.

All IROPS events shall be coordinated through the OCC.

14.3 DELAY CLASSIFICATION

Delays may be categorized as:

Weather Delays

Caused by:

- Thunderstorms.
- Fog.
- Snow.
- Strong winds.

Technical Delays

Caused by:

- Aircraft defects.
- Maintenance actions.
- Equipment failures.

Crew Delays

Caused by:

- Duty limitations.
- Crew shortages.
- Positioning issues.

Airport Delays

Caused by:

- Congestion.
- Gate availability.
- Infrastructure issues.

Security Delays

Caused by:

- Security incidents.
 - Screening requirements.
 - Law enforcement activity.
-

14.4 DELAY RESPONSE PROCEDURES

Upon identification of a significant delay:

1. OCC shall determine cause.
 2. Impact assessment shall be completed.
 3. Passenger communications shall begin.
 4. Recovery options shall be evaluated.
 5. Operational updates shall continue until resolution.
-

14.5 PASSENGER COMMUNICATION PROCEDURES

Passengers shall receive:

- Accurate information.
- Timely updates.
- Expected departure estimates.
- Recovery options.

Information shall not be speculative or misleading.

14.6 PASSENGER RECOVERY PROCEDURES

Recovery measures may include:

- Rebooking.

- Alternate routing.
- Accommodation.
- Meal vouchers.
- Transportation support.

Priority shall be given to minimizing passenger disruption.

14.7 DIVERSION MANAGEMENT

Diversions may occur due to:

- Weather.
- Medical emergencies.
- Security incidents.
- Technical concerns.
- Airport closures.

Diversion decisions shall prioritize safety.

14.8 DIVERSION RESPONSE PROCEDURES

Following a diversion:

1. Ground support shall be arranged.
 2. Passenger handling plans shall be activated.
 3. Fuel requirements shall be evaluated.
 4. Crew limitations shall be reviewed.
 5. Recovery planning shall begin.
-

14.9 CANCELLATION AUTHORITY

Flight cancellations may only be approved by authorized personnel.

Cancellation decisions shall consider:

- Safety.

- Operational feasibility.
- Resource availability.
- Passenger impact.

Safety considerations shall always take precedence.

14.10 CANCELLATION RESPONSE PROCEDURES

Upon cancellation:

1. Passenger notifications shall begin.
 2. Rebooking activities shall commence.
 3. Crew assignments shall be reviewed.
 4. Aircraft recovery plans shall be activated.
 5. Resource reallocation shall occur.
-

14.11 AIRCRAFT RECOVERY

Aircraft recovery may include:

- Aircraft substitutions.
- Schedule modifications.
- Repositioning flights.
- Maintenance adjustments.

Recovery efforts shall prioritize restoration of network stability.

14.12 CREW RECOVERY

Crew recovery activities may include:

- Reassignments.
- Reserve crew activation.
- Positioning arrangements.
- Schedule adjustments.

All actions shall remain compliant with duty regulations.

14.13 NETWORK RECOVERY

Network recovery planning shall consider:

- Fleet availability.
- Crew availability.
- Airport capacity.
- Passenger demand.
- Operational priorities.

The objective is restoration of normal operations as quickly as safely possible.

14.14 CUSTOMER SERVICE RECOVERY

Customer service recovery measures may include:

- Travel credits.
- Refunds.
- Accommodation.
- Meal assistance.
- Ground transportation.

Passenger welfare shall remain a primary consideration.

14.15 DOCUMENTATION REQUIREMENTS

All irregular operations events shall be documented.

Reports shall include:

- Cause.
- Duration.
- Operational impact.
- Recovery actions.

- Passenger impact.
-

14.16 POST-EVENT REVIEW

Following significant disruptions:

- Root causes shall be identified.
- Operational performance shall be reviewed.
- Corrective actions shall be developed.
- Lessons learned shall be documented.

Continuous improvement opportunities shall be incorporated into future operations.

14.17 PERFORMANCE MONITORING

Performance indicators include:

- Delay minutes.
- Cancellation rates.
- Diversion rates.
- Passenger recovery times.
- Operational recovery effectiveness.

Performance trends shall be reviewed regularly.

END OF SECTION 14 – DELAY, DIVERSION & CANCELLATION MANAGEMENT

SECTION 15

EMERGENCY RESPONSE PROCEDURES

Document ID: OPS-ERP-001

Department: Emergency Management

Category: Emergency Response

Priority: Critical

Version: 1.0

Reference Sources

- ICAO Emergency Response Guidance
 - FAA Emergency Planning Guidance
 - Airport Emergency Planning Standards
 - Flight Operations Manual Template
-

15.1 PURPOSE

The purpose of Emergency Response Procedures is to establish a coordinated framework for responding to emergencies affecting passengers, crew members, aircraft, facilities, personnel, or operations. Emergency response activities shall prioritize preservation of life, protection of property, operational continuity, regulatory compliance, and effective communication.

15.2 EMERGENCY CLASSIFICATION

Emergencies may include:

- Aircraft accidents.
- Aircraft incidents.
- Medical emergencies.
- Fire emergencies.
- Security incidents.
- Natural disasters.
- Hazardous material incidents.
- Airport evacuations.

All emergencies shall be classified according to severity and operational impact.

15.3 EMERGENCY NOTIFICATION PROCEDURES

Upon identification of an emergency:

1. Notify OCC immediately.
2. Notify emergency services.

3. Notify airport authorities.
4. Notify senior management.
5. Activate emergency response procedures.

Notifications shall include:

- Nature of emergency.
 - Location.
 - Time.
 - Personnel involved.
 - Immediate hazards.
-

15.4 EMERGENCY OPERATIONS CENTER ACTIVATION

The Emergency Operations Center (EOC) may be activated during significant events.

The EOC shall coordinate:

- Operational response.
- Resource allocation.
- Stakeholder communication.
- Regulatory coordination.
- Recovery activities.

The EOC shall remain active until emergency conditions are resolved.

15.5 AIRCRAFT ACCIDENT RESPONSE

In the event of an aircraft accident:

1. Activate emergency response plan.
2. Coordinate with emergency services.
3. Establish communication channels.
4. Support rescue operations.
5. Preserve evidence.
6. Support investigators.

Only authorized personnel may release information regarding the accident.

15.6 AIRCRAFT INCIDENT RESPONSE

Aircraft incidents may include:

- Engine failures.
- Emergency landings.
- System failures.
- Ground collisions.
- Runway excursions.

The OCC shall coordinate response activities and provide operational support until the incident is resolved.

15.7 MEDICAL EMERGENCY PROCEDURES

Medical emergencies involving passengers or crew shall be treated as priority events.

Personnel shall:

1. Contact medical assistance.
2. Assess immediate risks.
3. Coordinate emergency services.
4. Document actions taken.

Medical confidentiality shall be maintained whenever possible.

15.8 FIRE EMERGENCY PROCEDURES

Fire emergencies may involve:

- Aircraft fires.
- Terminal fires.
- Ground equipment fires.
- Fuel-related fires.

Upon detection of fire:

1. Raise alarm immediately.
2. Notify emergency services.

3. Evacuate affected areas.
4. Isolate hazards if safe.

Personnel shall not place themselves at unnecessary risk.

15.9 BOMB THREAT RESPONSE

Upon receiving a bomb threat:

1. Record all available information.
2. Notify security personnel.
3. Notify OCC.
4. Notify law enforcement.
5. Follow evacuation instructions if required.

Threats shall be treated seriously until assessed by competent authorities.

15.10 AIRPORT EVACUATION PROCEDURES

Evacuation may be required due to:

- Fire.
- Security threats.
- Structural hazards.
- Hazardous materials.
- Natural disasters.

Personnel shall guide passengers and staff to designated assembly areas.

Accountability procedures shall be initiated immediately following evacuation.

15.11 FAMILY ASSISTANCE

Following major emergencies, family assistance activities may include:

- Information centers.
- Passenger status support.

- Counseling support.
- Transportation assistance.

Family assistance activities shall be coordinated through designated response teams.

15.12 MEDIA COMMUNICATIONS

Only authorized spokespersons may communicate with media organizations.

Personnel shall not release:

- Passenger information.
- Crew information.
- Investigation findings.
- Unverified information.

Media communications shall be coordinated through approved channels.

15.13 BUSINESS CONTINUITY

During emergencies, critical functions shall be maintained whenever possible.

Business continuity planning shall address:

- Operational control.
- Communication systems.
- Personnel availability.
- Facility disruptions.

Recovery activities shall begin as soon as conditions permit.

15.14 POST-EMERGENCY REVIEW

Following emergency events:

- Investigations shall be conducted.
- Lessons learned shall be documented.
- Corrective actions shall be developed.
- Emergency plans shall be updated.

Performance reviews shall support continuous improvement.

15.15 TRAINING AND EXERCISES

Emergency response plans shall be tested periodically through:

- Tabletop exercises.
- Functional exercises.
- Full-scale drills.

Results shall be documented and reviewed.

END OF SECTION 15 – EMERGENCY RESPONSE PROCEDURES

SECTION 16

DANGEROUS GOODS MANAGEMENT

Document ID: OPS-DGR-001

Department: Cargo & Safety Operations

Category: Dangerous Goods Management

Priority: Critical

Version: 1.0

Reference Sources

- ICAO Technical Instructions
 - IATA Dangerous Goods Regulations
 - FAA Hazardous Materials Guidance
-

16.1 PURPOSE

The purpose of Dangerous Goods Management is to ensure the safe acceptance, handling, storage, transportation, loading, and reporting of hazardous materials transported by air. Dangerous goods activities shall comply with all applicable regulatory requirements and safety standards.

16.2 DANGEROUS GOODS CLASSIFICATION

Dangerous goods are classified into the following categories:

- Class 1 – Explosives.
- Class 2 – Gases.
- Class 3 – Flammable Liquids.
- Class 4 – Flammable Solids.
- Class 5 – Oxidizing Substances.
- Class 6 – Toxic and Infectious Substances.
- Class 7 – Radioactive Materials.
- Class 8 – Corrosive Materials.
- Class 9 – Miscellaneous Dangerous Goods.

Personnel shall be familiar with applicable classifications.

16.3 ACCEPTANCE PROCEDURES

Dangerous goods shall only be accepted when:

- Properly declared.
- Properly packaged.
- Properly labeled.
- Properly documented.
- Authorized for air transport.

Non-compliant shipments shall be rejected.

16.4 DOCUMENTATION REQUIREMENTS

Required documentation may include:

- Shipper declarations.
- Transport documentation.
- Emergency response information.
- Regulatory approvals.

Documentation shall be verified before shipment acceptance.

16.5 PACKAGING REQUIREMENTS

Dangerous goods packaging shall:

- Meet regulatory standards.
- Prevent leakage.
- Protect contents.
- Withstand transportation conditions.

Damaged packaging shall not be accepted.

16.6 LABELING REQUIREMENTS

Dangerous goods shipments shall display:

- Hazard labels.
- Handling labels.
- Identification markings.
- Regulatory markings.

Incorrect labeling shall be corrected before transport.

16.7 STORAGE PROCEDURES

Dangerous goods storage areas shall:

- Be secured.
- Be clearly identified.
- Maintain required segregation.
- Prevent unauthorized access.

Incompatible materials shall not be stored together.

16.8 LOADING PROCEDURES

Dangerous goods loading shall comply with:

- Aircraft limitations.
- Segregation requirements.
- Quantity restrictions.
- Safety requirements.

Loading personnel shall follow approved loading instructions.

16.9 LITHIUM BATTERY PROCEDURES

Lithium batteries represent a significant transportation risk.

Personnel shall verify:

- Packaging requirements.
- Quantity limitations.
- Documentation requirements.
- Regulatory compliance.

Damaged batteries shall not be accepted.

16.10 DANGEROUS GOODS INCIDENTS

Incidents may include:

- Leaks.
- Spills.
- Packaging failures.
- Undeclared dangerous goods.

Personnel shall immediately notify supervisors and safety personnel.

16.11 EMERGENCY RESPONSE

In the event of a dangerous goods incident:

1. Isolate the area.
2. Notify emergency responders.
3. Protect personnel.
4. Follow emergency guidance.
5. Document the event.

Personnel safety shall remain the highest priority.

16.12 REPORTING REQUIREMENTS

Dangerous goods incidents shall be reported according to:

- Regulatory requirements.
- Company policy.
- Airport requirements.

Reports shall include complete details of the event.

16.13 TRAINING REQUIREMENTS

Personnel involved with dangerous goods shall receive:

- Initial training.
- Recurrent training.
- Emergency response training.

Training records shall be maintained and monitored.

16.14 COMPLIANCE MONITORING

Dangerous goods compliance shall be monitored through:

- Audits.
- Inspections.
- Incident reviews.
- Performance assessments.

Corrective actions shall be implemented when deficiencies are identified.

SECTION 17

TRAINING, QUALITY ASSURANCE & COMPLIANCE

Document ID: OPS-TQC-001

Department: Training & Compliance

Category: Training and Regulatory Compliance

Priority: Critical

Version: 1.0

Reference Sources

- ICAO Training Guidance
- FAA Compliance Program Guidance
- Flight Operations Manual Template

17.1 PURPOSE

The purpose of Training, Quality Assurance, and Compliance is to ensure personnel possess the knowledge, skills, qualifications, and competencies required to perform assigned duties safely and effectively while maintaining compliance with regulatory requirements and company standards.

17.2 TRAINING GOVERNANCE

The Training Department shall establish and maintain training programs for all operational personnel.

Training programs shall address:

- Initial qualification.
- Recurrent qualification.

- Regulatory requirements.
 - Operational procedures.
 - Safety requirements.
-

17.3 INITIAL TRAINING

New personnel shall complete initial training before performing operational duties.

Initial training may include:

- Company orientation.
- Operational procedures.
- Safety requirements.
- Security requirements.
- Emergency procedures.

Successful completion shall be documented.

17.4 RECURRENT TRAINING

Personnel shall complete recurrent training at established intervals.

Recurrent training ensures:

- Knowledge retention.
- Procedural compliance.
- Regulatory compliance.
- Competency maintenance.

Personnel failing recurrent training requirements shall be removed from operational duties until compliance is restored.

17.5 COMPETENCY ASSESSMENT

Competency assessments may include:

- Written examinations.
- Practical evaluations.
- Operational observations.

- Simulations.

Assessment results shall be documented and retained.

17.6 TRAINING RECORDS

Training records shall include:

- Course completion dates.
- Qualifications.
- Certifications.
- Assessment results.
- Expiration dates.

Records shall be maintained securely and accurately.

17.7 QUALITY ASSURANCE PROGRAM

The Quality Assurance Program shall monitor:

- Operational compliance.
- Procedural effectiveness.
- Training effectiveness.
- Regulatory compliance.

Quality assurance activities shall support continuous improvement.

17.8 INTERNAL AUDITS

Internal audits shall evaluate compliance with:

- Company procedures.
- Regulatory requirements.
- Safety requirements.
- Security requirements.

Audit findings shall be documented and tracked.

17.9 REGULATORY COMPLIANCE

Compliance monitoring shall ensure adherence to:

- Aviation regulations.
- Airport requirements.
- Security requirements.
- Safety requirements.

Non-compliance issues shall be addressed promptly.

17.10 CORRECTIVE ACTION MANAGEMENT

Corrective actions shall be developed for:

- Audit findings.
- Incident investigations.
- Compliance deficiencies.
- Operational concerns.

Corrective actions shall remain open until verified as effective.

17.11 DOCUMENT CONTROL

Operational documents shall:

- Be version controlled.
- Be reviewed periodically.
- Be approved before release.
- Be distributed appropriately.

Personnel shall use only current approved documents.

17.12 LESSONS LEARNED PROGRAM

Lessons learned shall be collected from:

- Incidents.
- Audits.
- Operational reviews.
- Emergency events.

Findings shall be incorporated into training and procedures.

17.13 PERFORMANCE MONITORING

Training and compliance performance shall be monitored through:

- Training completion rates.
- Audit results.
- Compliance metrics.
- Qualification status.
- Corrective action effectiveness.

Performance trends shall be reviewed regularly.

17.14 CONTINUOUS IMPROVEMENT

The organization shall continuously improve through:

- Training enhancements.
- Audit programs.
- Safety reviews.
- Operational feedback.
- Regulatory updates.

Continuous improvement activities shall support safety, compliance, and operational excellence.

END OF SECTION 17 – TRAINING, QUALITY ASSURANCE & COMPLIANCE
